framework final version 1.1.pdf

Typical of me - I sent you the wrong version  
It should say Feb 2016 not Jan 2016 and so now the version is 1.1

Sorry. Her is correct version.

Hi

Here is version 1.0 of the framework to coordinate wetland, riparian, and stream monitoring and assessment across HCP/NCCP and 404/401. The Delta Science Program would like to reference this and use it to advance its causes. I'd like to give it to the DSP asap.

My thinking is that this is a living doc that has input from HCP, NCCPO, 404, and 401 but will benefit from ongoing commentary. But, we can't get the commentary without getting the doc in front of people. So let's do that.

For example, in addition to DSP, the USFWS Carlsbad Office is asking for a copy, as is the Santa Clara Valley HCP. I think Greg Gearheart should see this sooner than later, since it reaches into the corners of the wildlife conservation and water quality control worlds to identify existing tools that could work better together.

Can we make this broadly available for comment as version 1.0?

Let me know.

Thanks.
